Successful project: pkag Paul Keller Ingenieure AG

The initial situation/challenge: To remain competitive at both national and international levels, project monitoring had to be speeded up to identify critical projects at a glance

To complement the myPARM multi-project management solution, pkag Paul Keller Ingenieure AG was looking for a Management Information System, also known as a Performance Management System, allowing key performance indicators (KPIs) to be defined in order to monitor and control projects centrally. The solution had to be easy to operate and allow users to make role-based information available to all functional levels. The main aim was to simplify controlling and give management a quick overview of the status of the projects.

The solution: The Management Information System (MIS) from myPARM for quick project overview and efficient monitoring

The complete multi-project management package from myPARM led the company to introduce the MIS newly developed by myPARM as a platform for project controlling. This solution could be easily linked to the existing myPARM multi-project management system. The rapid project overview based on traffic lights and the individually configurable KPIs were particularly impressive. The high user-friendliness of the solution allowed fast and straightforward implementation.

The success story: Cost and time savings thanks to early defect identification

The MIS saves costs and time in project extensions and debtor accounts. Projects can now be controlled more accurately and project defects can be identified at an early stage – providing an early warning system. Furthermore, escalation messages keep managers informed of the progress of the project without having to check the system. This feature is a big time-saver and is very convenient to use.

About pkag Paul Keller Ingenieure AG

pkag Paul Keller Ingenieure AG is a successful engineering company based in Dübendorf, with offices throughout Switzerland and abroad. Its core competence is in planning, designing, construction management and commissioning of plants in the fields of railway engineering, energy and telecommunications.

Its customers include state and private railways, cantons, cities and leading companies in the energy, road construction and telecoms industries. pkag Paul Keller Ingenieure AG plays in a leading role in major projects such as Alptransit. The company employs around 45 people.
