Successful project: Amberg Engineering AG

The initial situation/challenge: The national and international growth of Amberg Engineering AG and the associated changing requirements made a new project management solution necessary

Amberg Engineering AG faced an enormous challenge in 2010: Changing demands and an obsolescent predecessor forced the company to look into a new project management system.

There was urgent need for a rapid and constantly updated overview of costs in relation to individual projects and the entire company as well as of simple daily expense reports independent of employee workplaces.

The solution: The myPARM web-based project management solution and the Management Information System from myPARM

Real-time project overviews showing employee discrepancies and the ability to correct them immediately were essential for the decision by Amberg Engineering AG. Quick and easy access to hourly costs was another important requirement. The good customer references in the same division and the specific know-how of the employees of parm ltd. supported the final decision.

The success story: Project inconsistencies identified and corrected at an early stage

From the perspective of the project managers, the constant availability of project and cost overviews is a feature that has proved its worth. From an accounting point of view, simple access to the hours recorded and their selection for charging was particularly important. The standard

reports are available quickly and provide clear information. Time savings can be achieved especially thanks to the automatic data processing. Furthermore, there are no waiting times and pressure is taken off the billing office, which previously had to process data individually in each case.

Thanks to solutions from parm ltd., Amberg Engineering AG has become more efficient and makes considerable time savings. The implementation by parm ltd. went smoothly with no complications. The customer considered the rapid response time and the presentation of solutions as the greatest benefits. Detailed alternatives were identified wherever the initial proposal was unfeasible.

About Amberg Engineering AG

With around 300 employees, Amberg Engineering AG is a globally leading engineering company in underground construction. It provides clients with professional and cost-effective solutions, from planning, design, site supervision and commissioning to the renovation and refurbishment of structures. Alongside this, its expertise includes project management and consulting, as well as inspections and status assessments.

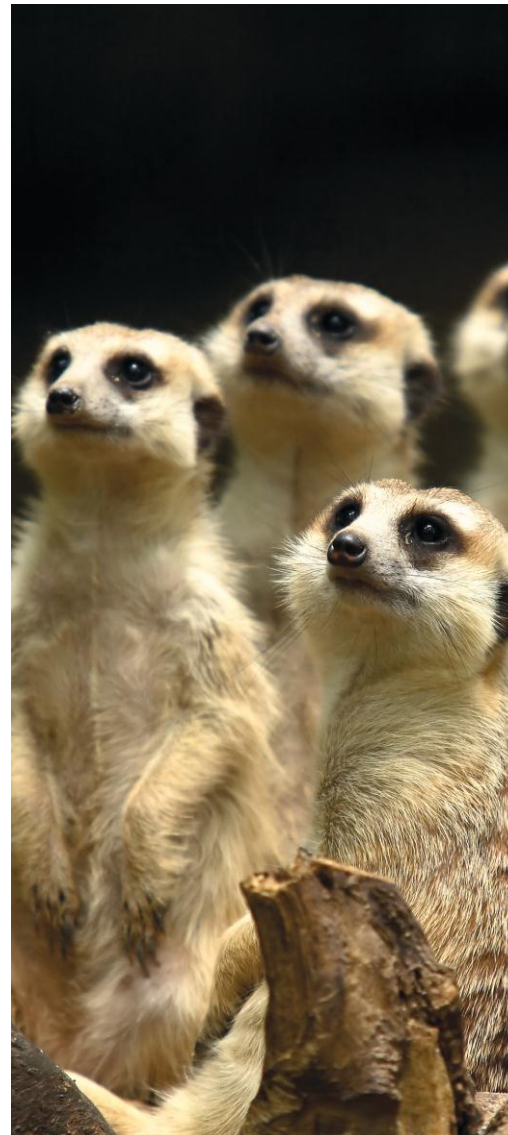

Amberg Engineering AG was founded in 1966. The company has offices in Switzerland and other countries and is part of the Amberg Group. The companies within the group utilise the available synergy potentials and work together as a network.

Stefan Hosang
Managing Director
Amberg Engineering AG

Statement des Kunden:

«We needed a web-based solution that can be rolled out internationally, can be used flexibly and provides a transparent overview of project finances in real time. myPARM and the Management Information System from parm ltd. is just the right solution for us.»
