Successful project: CSD Ingenieure AG

The initial situation/challenge: Replacing the existing project control system with a powerful state-of-the-art solution offering customer-specific adaptations

The existing system was a proprietary solution with a relatively wide range of functions, but it was technically obsolete and reaching its limit. It also required extensive IT resources and inhibited the company's future development. The decentralised structure and previous project control systems made high demands on the new solution. The evaluation led to a decision to opt for a standard solution, as there was no point in considering an update of the existing system.

The solution: The technically superior web-based solution from myPARM

CSD Ingenieure AG finally decided on myPARM, thanks to its impressive advantages for project evaluation and cost budgeting in addition to its technical superiority as a web-based solution. The web access allows users to obtain real-time data anytime, anywhere. myPARM covers the entire life cycle of a hierarchically structured project and allows business procedures to be streamlined and projects to be controlled in a more efficient and targeted manner. These features are applied in the initialisation, planning, implementation and completion of projects. This comprehensive solution allows the operators to obtain a realistic picture of ongoing projects and their associated risks and progress.

The success story: IT expenditures plummet

Thanks to the know-how of myPARM's specialists, it was possible to implement company-specific requirements and to complement the standard solution where necessary. This solution allowed IT expenditures to be minimised thanks to its simple and fast time recording. The transparent project presentation and the possibility of accessing real-time data quickly led to further time and cost savings. All the company's project management tasks are now handled successfully by myPARM.

About CSD Ingenieure AG

CSD Ingenieure AG is a leading Swiss engineering consultancy organised as an independent holding company. The company offers consulting services and develops cost-efficient solutions to improve quality of life and the environment. These activities encompass the fields of construction, the environment and natural resources. Customers are offered services dovetailed specifically to their needs.

The CSD Group has thirty branches in Switzerland, France, Belgium, Germany, Italy and Lithuania. This network ensures closeness to local customers and offers access to a multidisciplinary team of specialists. The company employs around 400 myPARM users. CSD Ingenieure AG generated turnover of CHF 50 million in 2010.

Bernhard Matter
Member of the Management Board
CSD Ingenieure AG

Statement of the customer:
«We have chosen the right product for our needs. We now have reliable figures in real time. The employee time recording system is excellent and IT costs are low.»
